SAMPLE BADGE IMAGES:

TEST/TRIAL RESULTS:

Barcode: We have been able to correctly read the required numbers from the supplied barcode badges with IDTech WCR3227-600S barcode reader connected to GAT Access 6200 S with modified firmware for 9600 baud operation.

Contactless Technologies (circle one):

125 kHz Proximity

13.56 MHz Smart Card

Other _____

We have been able to isolate and read a unique ID from the supplied media with an industry standard reader. Please confirm that the unique ID as listed below is consistent with the issuance source's expectations.

We are unable to isolate and read a unique ID from the supplied media. This application will require additional assistance from the card's issuance source to create a working solution.

Sample ID number (printed and/or established): _____ / _____

Displayed ID number with GAT Online Host emulator: _____ / _____

QUALIFIERS:

The ID number displayed within the GAT Online Host emulator correctly matches the printed or established number. This solution will work with GAT Access Mifare readers, both internal and external.

The ID number displayed within the GAT Online Host emulator correctly matches the printed or established number. This solution **will only work** when used with the specific reader and terminal combination as detailed above.

The purpose of the evaluation is to provide a working solution for the badges and/or readers submitted for testing.
