

Access Control | *management systems integration*

Radio Frequency Identification (RFID) Solutions that seamlessly enhance your enterprise management solution.

multiPASSID

We implement and service products that improve performance and accountability, providing amenity and control.

Access Control Solutions

To achieve the full benefit of our solutions, we leverage an ISO standard multiple use, high frequency RFID credential. Available today in several form factors, this single credential can assist with many applications to include door access control, check-in, employee time & attendance, cashless point of sale (POS), secure computer login, service delivery record keeping and more.

Barcode and Low Frequency (125 kHz) Applications

Traditional access and identity devices include barcode and proximity cards. Solutions to grant access and provide check-in with these technologies are integrated by use of the GAT Access 6200 Access Control Terminal. The terminal connects via a standard ethernet connection to the management software solution. Applications include facilities that have existing common perimeter door access systems that want to leverage their distributed credentials already in place.

These configurations vary based upon application, contact us to determine pricing for your specific application.

High Frequency (13.56 MHz) Applications

Smart card technology enables the use of creative offline extensions to expand amenity and control. Our purpose built devices leverage these international standards to lower the cost and increase functionality.

Management Software Integration

These solutions allow us to provide a properly qualified check-in function through a variety of compatible management solutions enabling the use of lockers, door access, vending and other applications. Standard, high frequency 13.56 MHz technology is enabled within select cardio equipment, as well as NFC compatible smart phones and tablets. Selection of this technology, provides the foundation for enhanced amenity and controls.

Commitment to Excellence

Our expertise with mechanical locking hardware coupled with today's advanced integrated systems, uniquely position us to tailor the most advanced and creative solutions specifically to your needs. At multiPASS-ID we pride ourselves on our ability to implement what is necessary, not what is available for sale.
